

# How can a bright and intelligent child struggle to learn to read?

## Is the child:

- + creative and imaginative?
- + great at 3D visual or kinetic games?
- + an out-of-the-box thinker?
- + strong in comprehension?
- + mature and empathetic?

## But also:

- a slow reader?
- needing lots of repetition for memorizing the alphabet, spelling, math facts, months of the year?
- confusing left from right?
- spending too much time on homework?
- having difficulty learning a foreign language?
- reads a basic word easily on one page only to struggle to sound it out on the next page?

**One in five** people have some range of dyslexia, including some incredibly successful professionals, even MacArthur "genius" award and Nobel prize winners! For better or for worse, their brains work differently.
